

## Binary Tree Level Order Traversal [\(View\)](#)

Given the `root` of a binary tree, return *the level order traversal of its nodes' values*. (i.e., from left to right, level by level).

### Example 1:

Input: `root = [3,9,20,null,null,15,7]`

Output: `[[3],[9,20],[15,7]]`

### Example 2:

Input: `root = [1]`

Output: `[[1]]`

### Example 3:

Input: `root = []`

Output: `[]`

### Constraints:

- The number of nodes in the tree is in the range `[0, 2000]`.
- `-1000 <= Node.val <= 1000`
