

## Split Array into Consecutive Subsequences [\(View\)](#)

You are given an integer array `nums` that is **sorted in non-decreasing order**.

Determine if it is possible to split `nums` into **one or more subsequences** such that **both** of the following conditions are true:

- Each subsequence is a **consecutive increasing sequence** (i.e. each integer is **exactly one** more than the previous integer).
- All subsequences have a length of **3 or more**.

Return `true` if you can split `nums` according to the above conditions, or `false` otherwise.

A **subsequence** of an array is a new array that is formed from the original array by deleting some (can be none) of the elements without disturbing the relative positions of the remaining elements. (i.e., `[1, 3, 5]` is a subsequence of `[1, 2, 3, 4, 5]` while `[1, 3, 2]` is not).

### Example 1:

**Input:** `nums = [1,2,3,3,4,5]`

**Output:** `true`

**Explanation:** `nums` can be split into the following subsequences:

`[1,2,3,3,4,5]` --> 1, 2, 3

`[1,2,3,3,4,5]` --> 3, 4, 5

### Example 2:

**Input:** `nums = [1,2,3,3,4,4,5,5]`

**Output:** `true`

**Explanation:** `nums` can be split into the following subsequences:

`[1,2,3,3,4,4,5,5]` --> 1, 2, 3, 4, 5

`[1,2,3,3,4,4,5,5]` --> 3, 4, 5

**Example 3:**

**Input:** `nums = [1,2,3,4,4,5]`

**Output:** `false`

**Explanation:** It is impossible to split `nums` into consecutive increasing subsequences of length 3 or more.

**Constraints:**

- `1 <= nums.length <= 104`
- `-1000 <= nums[i] <= 1000`
- `nums` is sorted in **non-decreasing** order.
