

Substring with Concatenation of All Words [\(View\)](#)

You are given a string `s` and an array of strings `words` of **the same length**. Return all starting indices of substring(s) in `s` that is a concatenation of each word in `words` **exactly once, in any order**, and **without any intervening characters**.

You can return the answer in **any order**.

Example 1:

Input: `s = "barfoothefoobarman"`, `words = ["foo","bar"]`

Output: `[0,9]`

Explanation: Substrings starting at index 0 and 9 are "barfoo" and "foobar" respectively.

The output order does not matter, returning `[9,0]` is fine too.

Example 2:

Input: `s = "wordgoodgoodgoodbestword"`, `words = ["word","good","best","word"]`

Output: `[]`

Example 3:

Input: `s = "barfoofoobarthefoobarman"`, `words = ["bar","foo","the"]`

Output: `[6,9,12]`

Constraints:

- `1 <= s.length <= 104`
- `1 <= words.length <= 5000`
- `1 <= words[i].length <= 30`
- `s` and `words[i]` consist of lowercase English letters.
