

Reverse Words in a String [\(View\)](#)

Given an input string `s`, reverse the order of the **words**.

A **word** is defined as a sequence of non-space characters. The **words** in `s` will be separated by at least one space.

Return *a string of the words in reverse order concatenated by a single space*.

Note that `s` may contain leading or trailing spaces or multiple spaces between two words. The returned string should only have a single space separating the words. Do not include any extra spaces.

Example 1:

Input: `s = "the sky is blue"`

Output: `"blue is sky the"`

Example 2:

Input: `s = " hello world "`

Output: `"world hello"`

Explanation: Your reversed string should not contain leading or trailing spaces.

Example 3:

Input: `s = "a good example"`

Output: `"example good a"`

Explanation: You need to reduce multiple spaces between two words to a single space in the reversed string.

Constraints:

- `1 <= s.length <= 104`
- `s` contains English letters (upper-case and lower-case), digits, and spaces ' '.
- There is **at least one** word in `s`.
