

Detect Capital [\(View\)](#)

We define the usage of capitals in a word to be right when one of the following cases holds:

- All letters in this word are capitals, like "USA".
- All letters in this word are not capitals, like "leetcode".
- Only the first letter in this word is capital, like "Google".

Given a string `word`, return `true` if the usage of capitals in it is right.

Example 1:

Input: `word = "USA"`

Output: `true`

Example 2:

Input: `word = "FlaG"`

Output: `false`

Constraints:

- `1 <= word.length <= 100`
- `word` consists of lowercase and uppercase English letters.
