

Palindrome Linked List [\(View\)](#)

Given the `head` of a singly linked list, return `true` if it is a palindrome.

Example 1:

Input: `head = [1,2,2,1]`

Output: `true`

Example 2:

Input: `head = [1,2]`

Output: `false`

Constraints:

- The number of nodes in the list is in the range `[1, 105]`.
- `0 <= Node.val <= 9`

Follow up: Could you do it in `O(n)` time and `O(1)` space?
