N-ary Tree Level Order Traversal (View)
Given an n-ary tree, return the *level order* traversal of its nodes' values.

Nary-Tree input serialization is represented in their level order traversal, each group of children is separated by the null value (See examples).
Example 1:

```
Input: root = [1,null,3,2,4,null,5,6]

Output: [[1],[3,2,4],[5,6]]
```

Example 2:

`Input: root =`
`[1,null,2,3,4,5,null,null,6,7,null,8,null,9,10,null,null,11,null,12,null,13,null,n`
`ull,14]`

`Output: [[1],[2,3,4,5],[6,7,8,9,10],[11,12,13],[14]]`

Constraints:

- The height of the n-ary tree is less than or equal to `1000`
- The total number of nodes is between `[0, 10⁴]`
